# The right colours for your interior.

Although the colour of your floor seems fairly obvious at first sight, it has a whole layer of subtle undertones. This underlying shade is called **the colour character** of your floor. **Harmony Lab** will help you to match this with the colour scheme of your interior.

## How it works

The colour character of our floors are categorised in 6 colour groups:

- yellow
- orange
- red
- purple
- blue
- green

Once you know the colour character, the **chromatic colour wheel** will guide you in your decisions.

## Harmonious colours

Using **harmonious colours** means using colours on the colour wheel that are either the same colour or the neighbouring colour of your floor's colour character. For example: if your floor has a blue character, this means using variations of blue, green, and purple.

Using **contrasting colours** means using colours that are directly opposite to your floor's colour character on the chromatic colour wheel. For example: if your floor has a yellow character, offset it with purple elements in your interior.

## Contrasting colours

**Speak your soul.  
Let your spirit live.**

# Finish.

### TIP
